Csizi Sample Shceme for the Description of the days **31**

Introduction

The following training curriculum was developed within the ECA – Emotion Cognition Action project, co-funded by the European Union's Erasmus+ Programme. The programme is a five-day professional development curriculum designed for educators, trainers and learning facilitators. It combines Social Emotional Learning (SEL), Character Strengths, Emotional Intelligence, Multiple Intelligences Theory and experiential learning methodologies.

Participants explore how emotions, strengths and attitudes influence learning, behaviour and decision-making while developing practical tools for creating student-centred learning environments that promote autonomy, creativity and engagement.

This guide includes module chapters to easily find module summaries, activities, resources and appendices. Throughout the course, each activity has been linked to show its main focus – theory, practical, discussion, or active learning. See the key below:

- Theory
- Practical
- Discussion
- Active Learning

Face-to-face Programme of Delivery

Suggested for a full, face-to-face, 5-day delivery

ECA Program Schedule (Emotion Cognition Action)

Time	DAY 1: Foundation	DAY 2: Diversity	DAY 3: Exploration	DAY 4: Design	DAY 5: Consolidation
09:30–11:00	**Module 1** Introductions & Project Goals	**Module 4** Creativity & Multiple Intelligences	**Module 7** Sample Urban Learning Activities	**Module 10** Multiple Intelligences Feedback &	**Module 13** Results & Personal Learning
11:00–11:15	*Break*	*Break*	Module 8 Preapration for Urban Exploration (until 12:15)	*Break*	*Break*
11:15–13:00	**Module 2** SEL & ECA Framework	**Module 5** Students's Needs and Inclusion	**Module 9** ECA Urban Roaming – Gdansk (12:15–15:15)	**Module 11** Humanities in Science	**Module 14** Feedback, PARS Model & Evaluation
13:00–13:30	*Lunch*	*Lunch*		*Lunch*	**Closing Ceremony** (13:00–13:30)

15:00–16:15	**Reflection** Learning Journal	**Team Building** Through Diversity	**Debrief & Reflection** (15:15–16:15)	**Peer Review & Evaluation** (15:15–16:15)	–

DAY 1 – FOUNDATIONS
Personal Experiences, SEL and Character Strengths

Focus
Building a psychologically safe learning environment.

09:30 – 11:00

Module 1: Introductions, Expectations and Project Goals

Objectives

- Create a safe and supportive learning environment.
- Build trust among participants.
- Introduce the ECA Learning Plan philosophy.

Activities

- Interactive icebreakers and personal introductions.
- Storytelling exercises focused on educational experiences.

1) Activity: Dixit Introductions & Programme Journey

Purpose: Introduce participants to the programme structure, create engagement, encourage personal reflection, and establish a psychologically safe learning environment.

Duration: 20–25 minutes

Materials:

- Dixit cards (or similar metaphor/image cards)
- Flipchart with programme agenda
- Sticky notes and markers

Instructions

Step 1: Choose a Card (3 minutes)

Spread the Dixit cards across the tables or floor.

Invite participants to select one card that represents:

"How I feel about participating in this programme today" or "What I hope to gain from this learning journey."

Encourage participants to choose intuitively rather than overthink their selection.

Step 2: Pair Sharing (5 minutes)

Participants work in pairs.

Each person briefly explains:

- Why they selected their card.
- What the image symbolizes for them.
- One expectation or goal they bring to the programme.

The partner listens actively and identifies one strength or positive quality they hear in the story.

Step 3: Programme Journey Mapping (7 minutes)

The facilitator presents the programme structure and learning pathway.

As each module is introduced (e.g., ECA Framework, SEL, Character Strengths, Wellbeing, Emotions, Feedback Skills), participants reflect on their chosen card and consider:

"Which part of this programme feels most relevant or important to me right now?"

Participants write this on a sticky note and place it next to the corresponding module on a visual agenda poster.

Step 4: Group Reflection (5–10 minutes)

Facilitate a brief plenary discussion using questions such as:

- What themes emerged from the cards you selected?
- What strengths and resources are already present in this group?
- Which learning topics are participants most curious about?
- What would make this programme meaningful and successful for you?

The facilitator highlights common themes and connects them to the programme objectives.

Debrief

Conclude by emphasizing that:

"Like the images on the Dixit cards, each participant brings unique experiences, perspectives and strengths. During this programme we will explore how social, emotional and character competencies help us understand ourselves, connect with others and create positive learning environments."

- Mapping participants' expectations.
- Presentation of the ECA mission:
  - Student autonomy.
  - Safe learning environments.
  - Learning through experience.

Outcomes

Participants establish psychological safety and understand the purpose of the programme.

11:00 – 11:15

Break

11:15 – 13:00

Module 2: SEL and the ECA Framework

Objectives

- Understand Social Emotional Learning.
- Explore the ECA model.
- Connect emotional competence with effective teaching.

Activities

- Group agreements and learning contract.
- Introduction to SEL.
- Introduction to ECA:
  - Emotions
  - Cognition
  - Action
- Discussion:
  - Why emotions matter in learning.
  - The role of empathy and cooperation.
  - SEL as an integral part of education.

Energizer : "The Rickshaw" (Building Trust Through Guided Movement)

Aim:

To build trust, strengthen communication, develop mutual support, and highlight the importance of clear guidance and shared responsibility within a team.

Duration: 15–20 minutes

Materials:

- Blindfolds (optional)
- Open space free of obstacles
- Cones or markers to create a simple route

Debrief

The activity is inspired by a traditional rickshaw, where one person relies on another to guide and support them throughout a journey.

Participants work in groups of three:

- **Passenger** – closes their eyes (or wears a blindfold).
- **Rickshaw Puller** – leads the passenger safely through the route.
- **Observer** – watches the interaction and notes behaviours that build or weaken trust.

The challenge is for the "Rickshaw Puller" to guide the "Passenger" through a designated course using only agreed communication methods.

Round 1: Verbal Guidance Only (5 minutes)

The Passenger closes their eyes.

The Rickshaw Puller stands behind or beside the Passenger and guides them through the route using only verbal instructions.

Examples:

- *"Take two small steps forward."*
- *"Turn slightly to your left."*
- *"Stop."*

The Observer notes:

- How clearly instructions are given.
- How the Passenger responds.
- Signs of trust, hesitation, confidence, or confusion.

Round 2: Non-Verbal Guidance (5 minutes)

Participants repeat the exercise, but this time verbal communication is not allowed.

The Rickshaw Puller may use:

- A hand lightly placed on the shoulder
- Gentle taps agreed beforehand
- Other safe non-verbal signals

Participants experience how trust and communication change when words are removed.

Round 3: Change Roles (5 minutes)

Participants rotate roles until everyone has experienced being:

- Passenger
- Rickshaw Puller
- Observer

Debrief Questions

For the Passenger

- What helped you feel safe?
- At what moment did you trust your partner most?
- What made you hesitate?

For the Rickshaw Puller

- What was challenging about guiding another person?
- How did you adapt your communication?
- What responsibility did you feel for your partner?

For the Observer

- What behaviours built trust?
- What behaviours reduced trust?
- How did communication affect confidence?

Outcomes

Participants understand how ECA supports SEL implementation.

13:00 – 13:30

Lunch

13:30 – 15:30

Module 3: Character Strengths and Personal Experiences

Objectives

- Identify individual strengths.
- Explore successful teaching experiences.
- Connect strengths with educational impact.

Activities

- Character Strengths exercise:

Activity: The World Needs Your Strengths

Aim:

To help teachers recognize, appreciate and intentionally apply their character strengths in educational practice using the VIA Character Strengths framework.

Duration: 30–40 minutes

Materials: Printed copies of The World Needs You – All 24 of Your Character Strengths (Ryan Niemiec, VIA Institute on Character).

Step 1: Individual Reflection (5 minutes)

Participants read the handout and highlight:

- One statement that resonates most strongly with them.
- One strength they use regularly in their professional role.
- One strength they would like to develop further.

Invite participants to reflect on:

"Which strength does my school, my colleagues, or my students need most from me right now?"

Step 2: Pair Discussion (10 minutes)

In pairs, participants share:

- Their chosen strength.
- Why it is important to them.
- A recent example of how they demonstrated it at work.

Partners listen actively and identify additional strengths they hear in the story.

Step 3: Group Activity – The School Needs You (15 minutes)

In groups of 4–6, participants discuss:

"What character strengths are most needed in our school community today?"

Each group selects 3–5 strengths and creates practical examples of how teachers can demonstrate them in everyday interactions with students, colleagues, and families.

Examples:

- **Kindness** – noticing and supporting struggling students.
- **Curiosity** – exploring innovative teaching approaches.
- **Hope** – maintaining belief in every learner's potential.
- **Leadership** – encouraging collaboration and positive change.

Groups briefly share their ideas with the whole group.

Debrief (5 minutes)

Facilitate a discussion using the questions:

- Which strengths are most visible in our school?
- Which strengths are underused?
- How can we intentionally apply our strengths more often?

According to the VIA Character Strengths framework, character strengths are positive qualities that help individuals and communities flourish. By intentionally using our strengths, we enhance wellbeing, strengthen relationships, and create more positive learning environments for students and colleagues.

Closing Reflection:

"The world needs my _____, and my students need it too."

- Sharing successful teaching moments.
- Identifying emotional dimensions of successful learning experiences.
- Connecting strengths with WEF Future Skills 2025

Activity: Character Strengths for Future-Ready Educators

Connecting VIA Character Strengths with the World Economic Forum Future Skills 2025

The World Economic Forum identifies key skills needed for success in 2025, including analytical thinking, resilience, creativity, leadership, empathy, motivation, curiosity, and lifelong learning. The VIA Character Strengths framework provides the character foundation that enables these future skills to develop and flourish.

Objective

Help teachers understand how character strengths support the development of future-ready competencies in themselves and their students.

Duration: 30–45 minutes

Step 1: Strengths and Future Skills Matching (10 minutes)

Participants work in small groups.

Each group receives cards containing:

- Selected VIA Character Strengths
- WEF Future Skills 2025

The task is to match strengths with future skills and explain the connection.

Examples:

WEF Future Skill	Related VIA Strengths
Analytical Thinking	Judgment, Perspective, Curiosity
Creative Thinking	Creativity, Curiosity, Bravery
Resilience, Flexibility and Agility	Perseverance, Hope, Self-Regulation
Motivation and Self-Awareness	Zest, Self-Regulation, Perspective
Empathy and Active Listening	Kindness, Love, Social Intelligence
Leadership and Social Influence	Leadership, Teamwork, Fairness
Lifelong Learning	Love of Learning, Curiosity, Humility

Step 2: School Practice Discussion (15 minutes)

Groups discuss:

"Which future skills will our students need most in the next 10 years?"

For each selected skill, participants identify:

- Which character strengths support it.
- How teachers can model those strengths.
- What classroom practices help students develop them.

Step 3: Creating a Future-Ready Teacher Profile (10 minutes)

Groups complete the statement:

"A future-ready teacher demonstrates..."

using both WEF skills and VIA strengths.

Example:

"A future-ready teacher demonstrates curiosity and love of learning to foster analytical thinking, uses kindness and social intelligence to build empathy, and applies perseverance and hope to model resilience."

Debrief

Facilitator highlights that while future skills de-

scribe what people need to be able to do, character strengths describe who they need to be while doing it.

Future Skills + Character Strengths = Human Flourishing

Technical and cognitive skills may change over time, but character strengths such as curiosity, kindness, judgment, perseverance, leadership, and hope remain essential foundations for learning, wellbeing.

Outcomes

Participants gain awareness of their personal strengths and teaching resources.

15:45 – 16:15

Reflection

Activities

- Individual reflection.
- Learning journal entries.
- Personal learning goals for the week.

Outcomes

Participants formulate development objectives for the programme.

DAY 2 – DIVERSITY
Creativity, Multiple Intelligences and Thinking Differences

Focus

Understanding diverse learning styles and cognitive preferences.

09:30 – 11:00

Module 4: Creativity and Multiple Intelligences

Objectives

- Explore different ways people learn.
- Experience multiple intelligence-based activities.

Activities

Energizer: *"Bazinga!"*

Aim:

A fast-paced energizer that boosts energy, concentration, active listening, and group cohesion. It helps participants become fully present, encourages laughter, and creates a positive atmosphere before collaborative work.

Duration: 5–10 minutes

Materials: None

Instructions

Participants stand in a circle.

The facilitator explains that the group will pass energy around the circle using simple actions and keywords.

Basic Rule

A participant turns to the person on their right or left, points with both hands and says:

"Bazinga!"

The receiving participant immediately continues by passing the "Bazinga" to another person.

The pace should gradually increase.

Additional Commands

Once participants are comfortable, introduce additional actions.

1. Bazinga

Passes the energy to the next person.

2. Boom!

The participant raises both hands and says:

"Boom!"

The direction of play changes.

3. Pow!

The participant points across the circle to someone else and says:

"Pow!"

The energy jumps directly to that person.

4. Freeze

The facilitator calls:

"Freeze!"

Everyone must stop moving instantly.

The last person to stop performs a fun challenge:

- shares a positive fact about themselves,
- names a favourite strength,
- gives the group a compliment.
- Introduction to Howard Gardner's Multiple Intelligences Theory.

Activity: Discovering Multiple Intelligences

Based on Howard Gardner's Theory of Multiple Intelligences

Aim:

To introduce Howard Gardner's theory and help them recognize that people learn, communicate, and demonstrate competence in different ways. The activity promotes self-awareness, appreciation of diversity, and inclusive teaching practices.

Duration: 30–40 minutes

Materials:

- Multiple Intelligences descriptions (one-page handout)
- Flipchart paper

- Markers
- Sticky notes

Step 1: Pair Reflection – "How Am I Smart?" (10 minutes)

Provide a brief introduction to Gardner's eight intelligences:

- Linguistic
- Logical-Mathematical
- Spatial
- Bodily-Kinesthetic
- Musical
- Interpersonal
- Intrapersonal
- Naturalistic

In pairs, participants discuss:

- Which intelligences best describe me?
- Which intelligences do I use most often in my teaching?
- Which intelligence do I rarely use?

Partners identify examples from each other's professional practice.

Step 2: Intelligence Corners (15 minutes)

Place signs around the room representing each intelligence.

Ask participants to move to the intelligence they believe is their strongest.

In small groups, participants discuss:

- How does this intelligence help me as an educator?
- What classroom activities naturally fit this intelligence?
- How might students with this intelligence learn best?

Each group prepares a short summary on a flipchart.

Step 3: Whole Group Challenge – One Topic, Eight Ways (10 minutes)

Choose a common classroom topic (e.g., Climate Change, Healthy Living, Friendship).

Each intelligence group designs a learning activity for that topic using its assigned intelligence.

Examples:

- Linguistic: storytelling or debate
- Logical: problem-solving challenge
- Spatial: mind map or poster
- Bodily-Kinesthetic: role-play
- Musical: song or rhythm activity
- Interpersonal: group discussion
- Intrapersonal: reflective journal
- Naturalistic: observation or classification task

Groups present their ideas.

Debrief

Discuss:

- What surprised you about the variety of approaches?
- Which intelligences are most valued in schools?
- Which intelligences may be overlooked?
- How can we create more inclusive learning experiences?

Gardner's theory reminds us that intelligence is multidimensional. Effective educators recognize and value different ways of learning, allowing every learner to use their strengths and develop their potential. By designing varied learning experiences, teachers create more engaging, equitable, and inclusive classrooms.

- Experiential exercises:
  - Visual interpretation.
  - Rhythm and music activities.
  - Collaborative problem-solving.

Outcomes

Participants experience diverse approaches to learning.

11:00 – 11:15

Break

11:15 – 13:00

Module 5: Students' Needs and Inclusion

Objectives

- Understand barriers to participation.
- Design more inclusive learning experiences.

Activities

- Analysis of learner profiles.

Purpose: To help participants identify barriers to participation, understand diverse learner needs, and design more inclusive learning experiences that

support engagement, belonging, and success for all students.

Duration: 20 minutes

Materials: Learner profile cards (fictional student cases), flipchart paper, markers.

Step 1: Pair Activity – Understanding the Learner (7 minutes)

Participants work in pairs and receive a learner profile describing a student with different needs, strengths, interests, and challenges.

Examples may include:

- A student with limited language proficiency.
- A highly able learner who needs additional challenges.
- A student with attention or concentration difficulties.
- A shy learner who rarely participates in group activities.

Pairs discuss:

- What strengths does this learner bring?
- What barriers to participation might they experience?
- What support could help them engage more fully?
- How might we adapt learning activities to meet their needs?

Step 2: Group Activity – Designing Inclusive Responses (10 minutes)

In groups of 4–6, participants share their learner profiles and identify common themes.

The group creates an "Inclusion Action Plan" by answering:

- What barriers are present in our profiles?
- Which barriers are related to the learning environment, teaching methods, or social interactions?
- What strategies can remove or reduce these barriers?
- How can we ensure every learner feels valued and included?

Groups record practical strategies such as:

- Flexible learning approaches
- Differentiated tasks
- Peer support
- Visual supports
- Choice and student voice
- Collaborative learning opportunities

Step 3: Debrief (3 minutes)

Each group shares one learner profile and one inclusive strategy that could significantly improve participation and engagement.

Outcome

To underline, that inclusive education begins with understanding learners as individuals with unique strengths, needs, and experiences. When educators focus on removing barriers rather than fixing learners, they create learning environments where all students can participate, contribute, and succeed. Diversity is not a challenge to overcome—it is a strength to embrace. It aims also to help participants identify barriers and opportunities for inclusion within learning environments and develop strategies that promote participation, belonging, and equitable access for all learners.

Duration: 20 minutes

Materials: Flipchart paper, markers, sticky notes.

Step 1: Pair Reflection – Who Might Be Excluded? (7 minutes)

Participants work in pairs and reflect on a typical classroom, learning activity, or school event.

They discuss:

- Who is likely to participate easily?
- Who might face barriers to participation?
- What factors could make learners feel excluded or overlooked?
- How can we create opportunities for everyone to contribute?

Partners identify at least three potential barriers related to learning, communication, physical access, culture, language, confidence, or social interaction.

Step 2: Group Activity – Creating an Inclusion Map (10 minutes)

In groups of 4–6, participants draw a simple map of a learning environment (e.g., classroom, playground, project activity, school event).

Using sticky notes, they identify:

Barriers

- What might prevent participation?
- Which learners could be disadvantaged?

Opportunities

- What already supports inclusion?
- What additional adjustments could improve access and engagement?

The group discusses:

- How can we remove or reduce identified barriers?
- How can student strengths be used to increase participation?
- What changes would help create a stronger sense of belonging?

Groups add practical inclusive strategies to their maps.

Step 3: Debrief (3 minutes)

Each group shares one significant barrier they identified and one action that could make the learning environment more inclusive.

Inclusion is not only about supporting individual learners—it is about creating environments where everyone can participate, contribute, and feel valued. By identifying barriers and intentionally designing opportunities for engagement, educators can build learning communities that celebrate diversity and promote belonging for all students.

- Discussion:
  - Confidence building.
  - Participation barriers.
  - Emotional safety in classrooms.

Outcomes

Participants identify strategies supporting diverse learners.

13:00 – 13:30

Lunch

13:30 – 15:00

Module 6: SAC and Thinking Differences

Objectives

- Understand Self-Access Centres (SAC).
- Explore individual thinking preferences.

Activities

- Introduction to SAC methodology.
- MBTI-based exploration of thinking differences.

Aim:

To help participants understand that people process information, make decisions, and solve problems differently. The activity promotes empathy, collaboration, and appreciation of diverse thinking styles.

Duration: 30-45 minutes

Step 1: Pair Discussion (15 minutes)

Participants work in pairs and reflect on a recent work-related challenge.

They discuss:

- How did I approach the problem?
- Did I focus more on facts or possibilities?
- Did I rely more on logic or people considerations?
- Did I prefer planning or flexibility?

Partners identify similarities and differences in their thinking styles.

Step 2: Group Challenge (30 minutes)

In groups of 4–6, participants receive a scenario:

"Your school has received funding for a new learning space. How should it be designed?"

Group members discuss the proposal from different MBTI perspectives:

Sensing (S): What practical details must be considered?

Intuition (N): What future possibilities can we imagine?

Thinking (T): What is the most logical solution?

Feeling (F): How will people be affected?

Judging (J): How should we organize implementation?

Perceiving (P): How can we remain flexible and creative?

The group creates a final recommendation that includes all perspectives.

Discuss:

Which perspectives were easiest or hardest for you?

What value did different viewpoints bring to the discussion?

How can understanding thinking preferences improve teamwork and communication?

There is no single "best" way of thinking. Diverse perspectives lead to better decisions, stronger collaboration, and more innovative solutions when all voices are valued and included.

Outcomes

Participants better understand individual learning and communication preferences.

15:00 – 16:15

Team Building Through Diversity

Activities

- Team role mapping.

Aim:

To help participants recognize the value of diverse roles, strengths, and contributions within a team. The activity promotes self-awareness, collaboration, and appreciation of different working styles.

Duration: 20 minutes

Materials: Team Role Cards (e.g., Coordinator, Innovator, Implementer, Analyzer, Relationship Builder, Finisher) or flipchart paper.

Step 1: Pair Reflection (7 minutes)

Participants work in pairs and discuss:

- What role do I naturally take in team situations?
- What do I contribute most to a group?
- What role do I find most challenging?
- What type of teammate helps me perform at my best?

Partners identify one key strength they observe in each other.

Step 2: Group Team Role Mapping (10 minutes)

In groups of 4–6, participants identify the different roles represented within their team.

The group creates a simple "Team Role Map" by placing members' names under the role(s) they most often perform.

Discussion questions:

- Which roles are strongly represented?
- Which roles are missing or underrepresented?
- How does diversity of roles improve team performance?
- What challenges can arise when certain roles dominate?

Step 3: Debrief (3 minutes)

Each group shares one insight about their team's diversity.

High-performing teams are not made up of people who think and work the same way. Effective teams benefit from a variety of strengths, perspectives, and roles. Understanding and valuing these differences improves communication, collaboration, problem-solving, and overall team effectiveness.

- Identifying complementary strengths.

Aim:

To help participants recognize how different strengths complement one another and contribute to effective teamwork. The activity encourages appreciation of diversity and highlights how combining strengths leads to better outcomes.

Duration: 20 minutes

Materials: Sticky notes, markers, flipchart paper.

Step 1: Pair Reflection – My Strengths, Your Strengths (7 minutes)

Participants work in pairs.

Each person identifies:

- One personal strength they bring to a team.
- One task or situation where they feel most effective.
- One area where they benefit from support from others.

Partners discuss how their strengths complement each other and identify situations where working together would create a stronger result than working alone.

Step 2: Group Activity – Strengths Network (10 minutes)

In groups of 4–6, participants write one key strength on a sticky note and place it on a flipchart.

The group then draws connections between strengths that naturally work well together.

Examples:

- Creativity + Planning
- Leadership + Teamwork
- Curiosity + Analytical Thinking
- Empathy + Communication
- Perseverance + Optimism

The group discusses:

- Which combinations create the greatest value?
- What happens when one strength is missing?
- How can team members support one another using their different strengths?

Step 3: Debrief (3 minutes)

Each group shares one example of a powerful strength combination they identified.

Strong teams are built not only on individual talents but on the ability to combine complementary strengths. When people recognize and value what others bring, they collaborate more effectively, solve problems more creatively, and achieve better results together.

- Building balanced educational teams.

Outcome:

To help participants understand the importance of diversity in strengths, roles, and perspectives when creating effective educational teams. The activity encourages reflection on team composition and collaborative practice.

Duration: 20 minutes

Materials: Flipchart paper, markers, sticky notes.

Step 1: Pair Reflection – What Makes a Great Team? (7 minutes)

Participants work in pairs and discuss:

- Think of the best team you have worked with. What made it successful?
- What strengths and qualities were represented?
- Which roles were essential for achieving results?
- What challenges arose when certain perspectives were missing?

Partners identify three characteristics of a balanced educational team.

Step 2: Group Challenge – Design the Ideal School Team (10 minutes)

In groups of 4–6, participants imagine they are creating a team to lead a new educational initiative.

The group identifies the strengths, roles, and qualities needed for success, such as:

- Creativity and innovation
- Organization and planning
- Communication and relationship building
- Leadership and decision-making
- Problem-solving and analytical thinking
- Empathy and student support

Groups create a visual "Balanced Team Profile" showing how different strengths contribute to achieving shared goals.

Discussion questions:

- Which strengths are most common in educational settings?
- Which strengths are often missing?
- How can teams benefit from diverse perspectives?

Step 3: Debrief (3 minutes)

Each group shares one insight about building balanced teams and one action they can take to strengthen collaboration in their own workplace.

Balanced educational teams are built on diversity rather than similarity. When individuals contribute different strengths, experiences, and perspectives, teams become more innovative, resilient, and effective in supporting both learners and colleagues.

Outcomes

Participants understand how diversity improves collaboration.

DAY 3 – EXPLORATION
The ECA City Experience

Focus

Using the city as a living classroom.

09:30 – 11:00

Module 7: Sample Urban Learning Activities

Activities

- Mapping emotions in public spaces.

Aim:

To help participants explore how different public and educational environments influence emotions, behaviour, wellbeing, and social interactions. The activity develops emotional awareness and encourages reflection on creating emotionally supportive spaces.

Duration: 20 minutes

Materials: Flipchart paper, markers, sticky notes.

Step 1: Pair Reflection – Emotions and Places (7 minutes)

Participants work in pairs and discuss:

Think of a public or educational space where you felt comfortable, motivated, or inspired.

- What emotions did the space evoke?
- What features contributed to those feelings?
- Have you experienced a space that created stress, anxiety, or discomfort? Why?

Partners identify common factors that influence emotional experiences in different environments.

Step 2: Group Activity – Emotional Mapping (10 minutes)

In groups of 4–6, participants choose a familiar public space (e.g., school, park, library, playground, shopping centre, train station).

On a flipchart, they create an "Emotion Map" by placing emotions in different areas of the space.

Examples:

- Welcome area → curiosity, excitement, belonging
- Classroom → confidence, engagement, anxiety
- Playground → joy, energy, connection
- Staff room → support, frustration, relaxation

The group discusses:

- What environmental factors influence emotions?
- Which areas promote positive emotions?
- Where might people experience stress or discomfort?
- How could the space be redesigned to support wellbeing?

Step 3: Debrief (3 minutes)

Each group shares one key insight and one recommendation for creating more emotionally positive environments.

Emotions are influenced not only by people but also by the environments we inhabit. By understanding how spaces affect feelings and behaviour, educators and leaders can create environments that promote wellbeing, engagement, inclusion, and positive relationships.

- Architectural storytelling.

Purpose: To explore how buildings and spaces communicate values, emotions, and experiences. The activity develops observation, empathy, and creative thinking while encouraging participants to reflect on how educational environments influence learning and wellbeing.

Duration: 20 minutes

Materials: Photos of buildings or educational spaces, flipchart paper, markers.

Step 1: Pair Reflection – If This Building Could Speak... (7 minutes)

Participants work in pairs and examine a photo of a building, school, library, or public space.

Together they discuss:

- What emotions does this place evoke?
- What story does this building tell about the people who use it?

- What values or messages are communicated through its design?
- How might different people experience this space?

Pairs create a short "voice" for the building by completing the sentence:

"If I could speak, I would tell visitors..."

Step 2: Group Activity – Creating the Story of a Space (10 minutes)

In groups of 4–6, participants choose one educational or public space and create its story from the perspective of a user (student, teacher, parent, visitor).

The group explores:

- What happens in this space?
- What emotions are experienced here?
- How does the design support or hinder interaction, creativity, learning, or wellbeing?
- What changes could make the story more positive?

Groups create a short narrative or visual map illustrating the journey through the space.

Step 3: Debrief (3 minutes)

Each group shares one insight about how environments influence people's experiences and behaviour.

Buildings and spaces tell stories through their design, atmosphere, and function. By understanding these stories, educators can create learning environments that foster belonging, engagement, wellbeing, and positive relationships. Thoughtfully designed spaces shape not only what people do, but also how they feel and connect with others.

- Scientific observation tasks.

Aim:

To develop participants' observation skills, attention to detail, curiosity, and evidence-based thinking. The activity highlights the importance of careful observation before making assumptions or conclusions.

Duration: 20 minutes

Materials: Interesting objects, photographs, nature items, or images of public/educational spaces; flipchart paper and markers.

Step 1: Pair Observation Challenge (7 minutes)

Participants work in pairs and observe a selected object or image for one minute without speaking.

After observation, partners discuss:

What did you notice first?

What details might others overlook?

What surprised you?

What assumptions did you make?

Pairs distinguish between:

Observations (what they can actually see)

Interpretations (what they think it means)

Step 2: Group Investigation (10 minutes)

In groups of 4–6, participants receive a photograph, object, or scene to investigate.

The group creates two lists:

- What We Know (Evidence)
- Facts directly observed
- What We Wonder
- Questions raised by the observations
- Possible explanations or hypotheses

Groups discuss:

- How do scientists gather evidence?
- Why is it important to separate facts from assumptions?
- What additional information would help us understand the situation?

Step 3: Debrief (3 minutes)

Each group shares one observation and one question that emerged during the investigation.

Effective observation is the foundation of learning, inquiry, and problem-solving. By slowing down, paying attention to details, and distinguishing evidence from assumptions, we become more thoughtful learners, educators, and decision-makers. Curiosity begins with careful observation.

- Interdisciplinary learning examples.

Aim:

To help participants understand how combining different subject areas creates richer, more meaningful learning experiences. The activity encourages creativity, collaboration, and holistic thinking in educational design.

Duration: 20 minutes

Materials: Flipchart paper, markers, sample curriculum topics (optional).

Step 1: Pair Reflection – Connecting Subjects (7

minutes)

Participants work in pairs and discuss:

- Think of a memorable learning experience. Did it involve more than one subject area?
- Which subjects naturally connect in your teaching context?
- How can interdisciplinary learning make content more engaging and relevant for students?

Partners identify one topic that could be taught through at least two different disciplines.

Step 2: Group Challenge – Design an Interdisciplinary Lesson (10 minutes)

In groups of 4–6, participants select a common theme such as:

- Sustainability
- Healthy Living
- Community
- Water
- Innovation

The group designs a learning activity that integrates at least three subject areas.

Examples:

- Theme: Sustainability
  - Science: environmental impact
  - Mathematics: data collection and analysis
  - Language Arts: persuasive campaign
- Theme: Community
  - History: local heritage
  - Art: community mural
  - Citizenship: social action project

Groups create a simple lesson outline showing how the disciplines connect to support learning.

Step 3: Debrief (3 minutes)

Each group briefly presents their idea and explains the benefits of integrating multiple subjects.

Outcome

To underline that, interdisciplinary learning helps students make meaningful connections between knowledge, skills, and real-world challenges. By integrating different perspectives and subject areas, educators foster creativity, critical thinking, collaboration, and deeper understanding.

11:00 – 12:15

Module 8: Preparation for Urban Exploration

Activities

- Observation techniques.

Aim:

To develop participants' ability to observe objectively, gather meaningful information, and use observation as a tool for understanding learning, behaviour, and interactions. The activity highlights the importance of distinguishing facts from interpretations.

Duration: 20 minutes

Materials: Short video clip, photograph, classroom scenario, or observation record sheet; flipchart paper and markers.

Step 1: Pair Observation Practice (7 minutes)

Participants work in pairs and observe a photo, short video, or classroom scenario.

Without discussing, each participant records:

- What did I actually see or hear?
- What evidence supports my observation?
- What assumptions might I be making?

Pairs then compare their notes and identify differences between:

- Objective observations (facts)
- Subjective interpretations (opinions or assumptions)

Step 2: Group Activity – Choosing the Right Observation Method (10 minutes)

In groups of 4–6, participants review several observation techniques, such as:

- Anecdotal records
- Running records
- Time sampling
- Event sampling
- Learning stories
- Checklists

The group discusses:

- When would each technique be most useful?
- What information can it capture?
- What are its strengths and limitations?

Groups match observation methods to different educational situations and explain their choices.

Step 3: Debrief (3 minutes)

Each group shares one observation technique they would like to use more effectively and one in-

sight gained from the activity.

Effective observation requires curiosity, attention, and objectivity. By focusing on evidence rather than assumptions, educators gain a deeper understanding of learners and can make more informed decisions that support development, wellbeing, and learning outcomes.

- Documentation methods.

Aim:

To explore different methods of documenting learning, observations, and development processes. The activity encourages participants to reflect on how documentation can make learning visible, support assessment, and strengthen communication with learners, families, and colleagues.

Duration: 20 minutes

Materials: Examples of documentation (photos, learning stories, portfolios, observation notes, videos, displays), flipchart paper, markers.

Step 1: Pair Reflection – Why Document? (7 minutes)

Participants work in pairs and discuss:

- What documentation methods do you currently use?
- What information do they help capture?
- Which methods are most meaningful for learners and families?
- What challenges do you experience when documenting learning?

Partners identify one documentation method they find particularly effective.

Step 2: Group Activity – Matching Methods to Purposes (10 minutes)

In groups of 4–6, participants review different documentation methods, such as:

- Observation notes
- Learning stories
- Photographs
- Student portfolios
- Video recordings
- Displays and exhibitions
- Reflective journals

The group discusses:

- What type of learning does each method capture best?
- Who is the audience (students, teachers, families, leadership)?
- What are the advantages and limitations of each approach?

Groups create a simple chart linking documentation methods with their educational purposes.

Step 3: Debrief (3 minutes)

Each group shares one documentation method they would like to use more intentionally and explains why.

Documentation is more than collecting evidence—it is a tool for reflection, communication, and making learning visible. Effective documentation helps educators better understand learners, celebrate progress, support assessment, and strengthen partnerships with families and the wider learning community.

- Team assignments.
- Defining observation lenses:
  - Emotional.
  - Social.
  - Environmental.
  - Scientific.

Aim:

To help participants understand how different observation lenses influence what we notice, interpret, and document. The activity develops awareness of multiple perspectives and promotes more comprehensive observation practices in educational settings.

Duration: 20 minutes

Materials: Photo, short video clip, classroom scenario, or image of a learning environment; flipchart paper and markers.

Step 1: Pair Activity – Looking Through Different Lenses (7 minutes)

Participants work in pairs and observe the same image or scenario.

Each pair is assigned one observation lens:

- Emotional Lens – What emotions are visible or likely being experienced?
- Social Lens – What interactions, relationships, or group dynamics can be observed?
- Environmental Lens – How does the physi-

cal environment influence behaviour and engagement?
- Scientific Lens – What observable facts, patterns, or evidence can be identified?

Pairs record their observations and prepare a brief summary.

Step 2: Group Activity – Comparing Perspectives (10 minutes)

Groups of 4–6 are formed with representatives from each observation lens.

Each participant shares their observations.

The group discusses:

- What did each lens reveal?
- Which details were noticed by some observers but missed by others?
- How did the observation lens influence interpretation?
- Why is it valuable to use multiple perspectives when observing learning environments?

The group creates a simple chart summarizing findings from all four lenses.

Step 3: Debrief (3 minutes)

Each group shares one insight that emerged when combining different observation perspectives.

Outcome

Observation is shaped by the lens through which we look. Emotional, social, environmental, and scientific perspectives each provide valuable information. Using multiple observation lenses helps educators develop a deeper, more balanced understanding of learners, interactions, and learning environments, leading to more informed and effective educational practice.

12:15 – 15:15

Module 9: ECA Urban Roaming-city tour

Activities

Participants work autonomously in small teams to:

- Document local stories.
- Map emotions and sounds.
- Observe human interactions.
- Identify science in everyday life.
- Explore urban ecosystems.

Outcomes

Participants experience experiential learning using the ECA framework.

15:15 – 16:15

Debrief and Reflection

Activities

- Sharing observations.
- Reflection on emotions, strengths and attitudes.
- Group discussion.

DAY 4 – DESIGN
From Experience to Educational Design

Focus

Creating educational activities using ECA principles.

09:30 – 10:00

Multiple Intelligences Feedback

Activities

- Reflection on city experience.
- Identifying activated intelligences.

Purpose: To help participants recognize how different types of intelligence (Howard Gardner's Multiple Intelligences) were activated during the city tour. The activity promotes self-awareness, reflection, and appreciation of diverse ways of learning and experiencing the environment.

Duration: 20 minutes

Materials: Multiple Intelligences handout, sticky notes, flipchart paper, markers.

Step 1: Pair Reflection – How Did I Experience the City? (7 minutes)

Participants work in pairs and reflect on their city exploration experience.

Discussion questions:

- What attracted your attention most during the tour?
- How did you engage with the environment?
- Which activities felt most natural or enjoyable?
- Which intelligences do you think you used most?

Participants identify examples of activated intelligences, such as:

- **Spatial Intelligence** – observing architecture, maps, and visual details.
- **Interpersonal Intelligence** – discussing observations with others.
- **Naturalistic Intelligence –** noticing parks, nature, and environmental features.
- **Linguistic Intelligence** – interpreting stories, signs, and historical information.
- **Logical-Mathematical Intelligence** – identifying patterns and connections.
- **Intrapersonal Intelligence** – reflecting on personal thoughts and emotions.
- **Bodily-Kinesthetic Intelligence** – navigating and exploring physical spaces.

Step 2: Group Activity – Intelligence Mapping (10 minutes)

In groups of 4–6, participants create a "City Intelligence Map."

The group lists the different experiences from the tour and identifies which intelligences were activated in each situation.

Discussion questions:

- Which intelligences were activated most frequently?
- Which were less visible?
- How did different participants experience the same environment differently?
- How can city-based learning engage multiple intelligences simultaneously?

Groups create a visual map linking observations to Gardner's intelligences.

Step 3: Debrief (3 minutes)

Each group shares one example of an activity or observation that activated multiple intelligences at the same time.

Outcome

Learning happens in many different ways. The city tour demonstrated that real-world experiences naturally activate multiple intelligences, allowing individuals to engage with their environment through different strengths, perspectives, and ways of understanding. Recognizing these differences helps educators design richer and more inclusive learning experiences for all learners.

10:00 – 11:00

Module 10: Reflection on Urban Learning

Activities

- Visual mapping.

Purpose: To help participants organize, interpret, and visualize their observations from the city tour. The activity promotes collaboration, critical thinking, and the ability to identify connections between people, places, emotions, and learning experiences.

Duration: 20 minutes

Materials: Large flipchart paper, markers, sticky notes, photos from the city tour (optional).

Step 1: Pair Reflection – What Stands Out? (7 minutes)

Participants work in pairs and review their notes, photos, or memories from the city exploration.

They discuss:

- What were the most memorable observations?
- Which places, people, or experiences had the greatest impact?
- What patterns or connections did you notice?
- What surprised you during the tour?

Pairs select 3–5 key observations to share with the group.

Step 2: Group Activity – Creating a Visual Map (10 minutes)

In groups of 4–6, participants create a visual map representing their city experience.

The map may include:

- Important locations visited
- Observations and discoveries
- Emotions experienced
- Social interactions
- Environmental features
- Questions and reflections
- Groups use symbols, drawings, keywords, arrows, and colours to show relationships and connections between observations.

Discussion questions:

- What themes emerged from our observations?
- How are people, places, and experiences connected?
- What does our map reveal about the city as a learning environment?

Step 3: Debrief (3 minutes)

Each group briefly presents its visual map and shares one key insight or discovery from the activity.

Visual mapping helps transform observations into meaningful understanding. By organizing information visually, participants can identify patterns, make connections, and develop a deeper understanding of complex environments. Visual tools support reflection, collaboration, and holistic learning by making thinking visible.

- Metaphorical reflection

Aim :

To encourage participants to reflect deeply on their experiences, observations, and learning through the use of metaphors. The activity promotes creativity, self-awareness, and personal meaning-making.

Duration: 20 minutes

Materials: Dixit cards, image cards, postcards, or printed photos (optional); flipchart paper and markers.

Step 1: Pair Reflection – Finding a Metaphor (7 minutes)

Participants work in pairs and reflect on the city tour.

Each participant completes the sentence:

"The city exploration was like _____ because _____."

Examples:

- A puzzle because every observation revealed a new piece of the story.
- A mirror because it reflected different perspectives and experiences.
- A bridge because it connected people, places, and ideas.
- A garden because it contained diversity, growth, and hidden treasures.

Partners share their metaphors and explain their meaning.

Step 2: Group Activity – Collective Metaphor Gallery (10 minutes)

In groups of 4–6, participants share their metaphors and identify common themes.

The group creates a visual poster titled:

"Our City Exploration Through Metaphors"

They select one collective metaphor that best represents their shared experience and explain:

- Why this metaphor was chosen.
- What it reveals about the learning process.
- How it connects to observation, discovery, and collaboration.

Groups may use drawings, symbols, keywords, or images to illustrate their metaphor.

Step 3: Debrief (3 minutes)

Each group presents its collective metaphor and one key insight gained from the reflection.

Outcome:

To emphasize that metaphors help us make sense of experiences by connecting observations with emotions, ideas, and personal meaning. Reflecting through metaphors encourages deeper learning, creativity, and perspective-taking, allowing participants to see familiar experiences in new and insightful ways

- Identifying unexpected discoveries.- discussion

11:15 – 13:00

Module 11: Humanities in Science

Objectives

- Integrate science with humanistic perspectives.

Activities

- Climate science and ethics.

Aim:

To explore the relationship between scientific evidence and ethical decision-making, helping participants understand how scientific challenges such as climate change require both scientific knowledge and human values.

Duration: 20 minutes

Materials: Climate-related scenario cards, flipchart paper, markers.

Step 1: Pair Reflection – Facts and Values (7 minutes)

Participants work in pairs and discuss the following scenario:

A city plans to reduce carbon emissions by limiting car traffic in the city centre. While this could improve air quality and reduce emissions, some residents worry about accessibility and economic impact.

Discussion questions:

- What scientific facts should be considered?
- What ethical or social concerns might arise?
- Who could benefit from this decision?
- Who might be negatively affected?

Pairs identify at least one scientific argument and one ethical consideration.

Step 2: Group Activity – Balancing Science and Ethics (10 minutes)

In groups of 4–6, participants create a two-column chart:

- Scientific Perspective | Humanistic/Ethical Perspective
- Evidence and data | Fairness and inclusion
- Environmental impact | Community wellbeing
- Long-term sustainability | Individual needs and rights

The group discusses:

- How can science inform responsible decisions?
- Why are ethical perspectives important when applying scientific knowledge?
- How can conflicting interests be balanced?

Groups develop one recommendation that considers both scientific evidence and ethical responsibility.

Step 3: Debrief (3 minutes)

Each group shares its recommendation and explains how science and ethics were integrated into the decision-making process.

Scientific knowledge helps us understand the world, but ethical thinking helps us decide what we should do with that knowledge. Addressing complex challenges such as climate change requires both evidence-based reasoning and consideration of human values, wellbeing, fairness, and responsibility toward future generations.

- Storytelling in science education.

Aim:

To demonstrate how storytelling can make scientific concepts more engaging, meaningful, and accessible by connecting scientific knowledge with human experiences, emotions, and real-world contexts.

Duration: 20 minutes

Materials: Science topic cards (e.g., climate change, biodiversity, space exploration, renewable energy), flipchart paper, markers.

Step 1: Pair Reflection – The Human Side of Science (7 minutes)

Participants work in pairs and select a scientific topic.

They discuss:

- Who is affected by this scientific issue?
- What human experiences or emotions are connected to it?
- How could this topic be explained through a personal story?

Together, pairs create a short story starter beginning with:

"Imagine you are..." or *"Meet a person who..."*

Example:

"Meet a young scientist trying to protect her town from rising sea levels."

Step 2: Group Activity – Turning Science into a Story (10 minutes)

In groups of 4–6, participants choose one scientific topic and create a brief story that includes:

- A character
- A scientific challenge or discovery
- Scientific facts or evidence
- A decision, action, or solution
- A meaningful lesson or message

The group discusses:

- How does storytelling help people understand science?
- What scientific information must remain accurate?
- How can stories increase curiosity and engagement?

Groups prepare a 1-minute presentation of their story.

Step 3: Debrief (3 minutes)

Each group shares its story and reflects on how storytelling changed the way they thought about the scientific topic.

Science is not only about facts and data—it is also about people, questions, discoveries, and real-life experiences. Storytelling helps learners connect with scientific concepts emotionally and intellectually, making science more relevant, memorable, and meaningful. By combining evidence with narrative, educators can inspire curiosity, empathy, and deeper understanding.

- Philosophy and scientific inquiry.

Aim:

To explore the connection between philosophical thinking and scientific inquiry, helping participants understand how curiosity, questioning, reasoning, and reflection drive scientific discovery and knowledge creation.

Duration: 20 minutes

Materials: Question cards, flipchart paper, markers.

Step 1: Pair Reflection – Big Questions (7 minutes)

Participants work in pairs and discuss one philosophical question related to science, such as:

- Can science answer every question?
- What is the difference between belief and evidence?
- How do we know something is true?
- Should there be limits to scientific research?

Pairs share their perspectives and identify questions that science can investigate and questions that require ethical or philosophical reflection.

Step 2: Group Activity – The Inquiry Circle (10 minutes)

In groups of 4–6, participants receive a scientific topic (e.g., artificial intelligence, climate change, genetic engineering, space exploration).

The group explores the topic through two lenses:

Scientific Inquiry

- What evidence is available?

- What questions can be investigated scientifically?
- What data would we need?

Philosophical Inquiry

- What ethical issues arise?
- What assumptions are being made?
- What are the possible consequences for society?

Groups create a simple chart comparing scientific and philosophical questions and discuss how both perspectives contribute to understanding complex issues.

Step 3: Debrief (3 minutes)

Each group shares one scientific question and one philosophical question that emerged during the discussion.

Outcome:

To underline, that science begins with curiosity and questioning, but not all important questions can be answered through experiments alone. Philosophy helps us examine assumptions, values, ethics, and meaning, while science provides evidence and explanations. Together, philosophical and scientific inquiry support critical thinking, informed decision-making, and a deeper understanding of the world.

- Interdisciplinary learning examples- discussion.

13:00 – 13:30

Lunch

13:30 – 15:00

Module 12: Designing ECA Activities

Objectives

Create original learning activities.

Activities

Groups design a complete learning experience including:

- Learning objectives.
- ECA learning process.
- Triple Unit activity structure.
- Materials list.
- Reflection questions.
- Assessment approach.

DAY 5 – CONSODILATION
The ECA City Experience

Focus
Transferring learning into professional practice.

09:30 – 11:00

Module 13: Results and Personal Learning Journey

Activities
- Visual learning timeline.

Purpose:
To help participants reflect on their learning journey throughout the training, identify key insights, and translate learning into future professional practice. This activity supports personal reflection, knowledge consolidation, and action planning aligned with the ECA approach of balancing emotions, cognition, and action.

Duration: 20 minutes

Materials: A3 paper or flipchart paper, markers, sticky notes, coloured pens.

Step 1: Pair Reflection – My Learning Journey (7 minutes)
Participants work in pairs and draw a simple timeline representing their experience during the training.

Along the timeline, they mark:
- A key insight that changed their thinking.
- A memorable activity or experience.
- A challenge they encountered.
- A moment of inspiration or discovery.
- One idea they want to apply in their professional practice.

Partners share their timelines and discuss:
- Which learning experience had the greatest impact?
- How has your perspective on teaching and learning changed?
- What new practices would you like to introduce in your educational setting?

Step 2: Group Activity – Collective Learning Map (10 minutes)
In groups of 4–6, participants combine their reflections to create a shared visual timeline of the programme.

The group identifies:
- Most significant learning moments.
- Key themes that emerged across modules.
- Skills and competencies developed.
- Practical applications for schools and classrooms.

Participants use symbols, keywords, drawings, or icons to represent emotions, knowledge, and actions experienced during the programme.

The group then discusses:

"How can we transfer these learnings into everyday educational practice?"

Each group identifies 2–3 concrete actions they will take after the training.

Step 3: Debrief and Closing (3 minutes)
Each group shares one key learning outcome and one action commitment.

Learning becomes meaningful when it is reflected upon and translated into action. Just as the ECAB project promotes the integration of emotion, cognition, and action, effective professional growth occurs when participants connect what they have learned with how they will apply it in their schools, classrooms, and communities.
- Reflection on key insights.
- Identifying implementation opportunities.

Outcomes
Participants connect learning with future practice.

11:15 – 13:00

Module 14: Feedback, PARS Model and Final Evaluation

Objectives
- Strengthen developmental feedback skills.

- Evaluate learning outcomes.

Activities

- Introduction to strengths-based feedback.
- PARS feedback model practice.

Aim:

To strengthen participants' ability to provide constructive, developmental feedback that supports growth, reflection, and motivation. The activity also encourages participants to reflect on their learning outcomes and future professional development.

Duration: 20 minutes

Materials: PARS feedback framework handout, reflection notes from previous modules, flipchart paper.

Step 1: Pair Practice – Giving Developmental Feedback (7 minutes)

Participants work in pairs and briefly share one learning achievement or professional goal identified during the programme.

Partners use the PARS Model to provide feedback:

- **P – Positive:** What strengths or successes did I observe?
- **A – Ask:** What questions could encourage deeper reflection?
- **R – Recommend:** What suggestions could support further growth?
- **S – Support:** How can this learning be sustained or applied in practice?

Each participant gives and receives feedback.

Discussion questions:

- Which part of the feedback was most valuable?
- How did the questions support reflection?
- What feedback felt most motivating?

Step 2: Group Activity – Learning Outcomes Reflection (10 minutes)

In groups of 4–6, participants reflect on the programme and discuss:

- What have we learned?
- Which skills or competencies have we strengthened?
- What changes do we plan to implement in our professional practice?
- How can we support one another after the training?

The group creates a "Learning and Action Poster" summarizing:

- Key insights
- New competencies
- Practical applications
- Future commitments

Step 3: Final Evaluation and Closing (3 minutes)

Each participant completes the sentence:

"One thing I will take from this programme and apply in my practice is..."

Groups share their final reflections and celebrate their collective learning journey.

Effective feedback focuses on growth rather than judgment. By using the PARS model, educators create a supportive environment that encourages reflection, learning, and continuous improvement. The true value of professional development lies not only in what we learn, but in how we apply that learning to improve educational practice and positively impact learners.

- Peer coaching conversations.
- Kirkpatrick evaluation framework.

Aim:

To evaluate the impact of the training using the Kirkpatrick Model and help participants reflect on learning, behavioural changes, and future application in professional practice.

Duration: 20 minutes

Materials: Kirkpatrick Framework handout, sticky notes, flipchart paper, markers.

Step 1: Pair Reflection – Evaluating the Learning Experience (7 minutes)

Participants work in pairs and review the four levels of the Kirkpatrick Evaluation Framework:

- **Level 1 – Reaction:** How did I experience the training?
- **Level 2 – Learning:** What knowledge, skills, or attitudes did I gain?
- **Level 3 – Behaviour:** How will I apply what I learned in my professional practice?
- **Level 4 – Results:** What positive impact could this have on students, colleagues, or my organisation?

Pairs discuss one example for each level and identify the most significant outcome of the programme.

Step 2: Group Activity – Impact Mapping (10 minutes)

In groups of 4–6, participants create a visual "Kirkpatrick Impact Map."

Using a flipchart, they record responses under the four levels:

Level	Reflection Questions
Reaction	What did participants value most?
Learning	What new competencies were developed?
Behaviour	What actions will be implemented after the training?
Results	What long-term impact could this create?

The group identifies 2–3 concrete actions they will implement in their educational setting and discusses how success could be measured.

Step 3: Debrief and Closing (3 minutes)

Each group shares one key learning outcome and one anticipated impact on practice.

Effective evaluation goes beyond measuring satisfaction. The Kirkpatrick Framework helps educators reflect on how learning translates into action and results. Professional development is most valuable when it leads to meaningful changes in practice and positive outcomes for learners, colleagues, and the wider educational community.

- Personal commitment planning.

Aim:

To support participants in transferring learning into professional practice by identifying concrete actions, setting realistic goals, and committing to future implementation. The activity encourages ownership, accountability, and sustained professional growth.

Duration: 20 minutes

Materials: Personal Commitment Template, sticky notes, pens.

Step 1: Pair Reflection – From Learning to Action (7 minutes)

Participants work in pairs and reflect on the programme.

They discuss:

- What is the most important insight I am taking away from this training?
- Which new skill, strategy, or mindset do I want to apply?
- What change would have the greatest positive impact on my students, colleagues, or educational setting?

Each participant identifies one personal commitment for the coming month.

Partners ask clarifying questions to help make the commitment specific and achievable.

Step 2: Group Activity – Commitment Sharing Circle (10 minutes)

In groups of 4–6, participants complete the following statements:

- I will start...
- I will continue...
- I will improve...
- I will share with others...

Participants present their commitments to the group.

The group discusses:

- What support may be needed to achieve these goals?
- What potential barriers might arise?
- How can colleagues encourage and sustain implementation?

Each participant writes their commitment on a sticky note and places it on a shared "Action Wall."

Step 3: Closing Reflection (3 minutes)

Participants complete the sentence:

"The first action I will take after this training is..."

The facilitator invites participants to revisit their commitments after one month and reflect on their progress.

Professional learning creates lasting impact when it is translated into action. Small, intentional steps can lead to meaningful change in educational practice. By making personal commitments and sharing them with others, educators strengthen accountability, sustain motivation, and increase the likelihood that learning will lead to positive outcomes for students, colleagues, and the wider learning community.

Outcomes

Participants create individual implementation plans.

13:00 – 13:30

Closing Ceremony

Activities

- Certificates.
- Final reflections.
- Establishment of the international learning network.

15:15 – 16:15

Peer Review and Evaluation

Activities

- Presentation of designed activities.
- Peer feedback.
- Revision recommendations.

Expected Learning Outcomes

By the end of the programme participants will:

- Understand and apply the ECA framework.
- Strengthen emotional awareness and self-regulation.
- Identify and develop personal character strengths.
- Use strengths-based feedback approaches.
- Facilitate psychologically safe learning environments.
- Design experiential learning activities.
- Apply Multiple Intelligences and inclusion principles.
- Use urban environments as learning spaces.
- Create ECA-based educational materials.
- Develop a personal action plan for implementation in their own educational context.

Required Materials

Handouts

- ECA Framework Guide
- Character Strengths Profiles
- Multiple Intelligences Questionnaire
- MBTI Reflection Guide
- Lesson Planning Templates
- Reflection Journal

Tools

- Flipcharts
- Sticky Notes
- Markers
- Creativity Cards
- Cameras or Mobile Phones
- Observation Journals
- Dixit cards

Urban Learning Resources

- City Maps
- Observation Sheets
- Reflection Templates
- Documentation Checklists
