

Question Collection - UNIVERSE

School: Grade: 5 Subject: Geography Teacher:
Date:

Goals:

- involve kids in the topic
- find out who wants to know what exactly
- to generate student questions

Teacher's questions:

- What is the structure of the Solar System and what objects does it contain?
- How do gravity and orbits work to keep planets, moons, and other celestial bodies in place?

Students' questions:

<u>You know (about the topic)</u>	<u>You don't know /understand</u>	<u>You want to know</u>
- The Sun is a star. - The Earth orbits the Sun. - The Moon goes around the Earth. - There are planets in the Solar System. - Stars are in the sky at night.	- Black holes - How galaxies collide. - stars have life cycles - life beyond Earth.	-How do we know how big the Universe is if no one has been to the end of it? -What was there <i>before</i> the Universe began? - Why are there so many stars, and why don't they crash into each other? - What keeps the planets in their places so they don't fly away? - Could there be another Earth somewhere far away? - What happens if someone falls into a black hole?

		- Why do stars shine, and why don't they burn out right away? - Where did the Sun come from, and how long will it keep shining? - Why do astronauts float in space? - What would the sky look like if we lived on another planet?
