- Bird Feeder 6
- Biodiversity 7
- Rocks and Minerals 8
- Lemon balm 9
- Cherry 10
- Trees 11
- Bushes and Shrubs 12
- Bee hotels 13

SKILL-BUILDING LESSON PLANS 14
- Observation 15
- Observation as an Attitude 16
- Describing things 17
- Describing without judging 18
- Comparing 19
- Measuring 20
- Measuring 2 21
- Classification 22
- Classification 2 23

ECO DAYS LESSON PLANS 24
- No Car Use 25
- Animals 26
- The Soil 27
- Wetlands 28
- The Forest 29
- The Earth 30

NATURE IN THE CLASSROOM LESSON PLANS 31
- Building a florarium 32
- The Web of Life 33
- Food Web 34

UNIVERSE LESSON PLANS 35
- The Universe 36
- The Solar System 37
- Mercury 38
- Venus 39
- Earth 40
- Mars 41
- Gas Giant 42
- The Milky Way 43
- The Blackholes 44
- Nabulae 45
- Comets 46
- Galaxy 47
- Stars 48
- Constellation 49

ECA WORKSHEETS 50
- Seed Germination Laboratory 51
- Classroom Composting – Vermicomposting 52
- Describing without judging 53
- Observing Birds 54

ECA HOMEWORKS 55
- Water Rescue Mission 56
- International Day for Biological Diversity 57
- Supernovae 58

ECA PROJECT PLANS 59
- Recycling 60
- Pollinator Week 61
- Nature Table 62

Introduction

This collection contains 50 practical ECA activities: 40 lesson plans, 4 worksheets, 3 homework activities and 3 project outlines. The materials are designed primarily for lower primary education, but teachers can adapt them to their own groups and learning environments.

The activities are based on three interconnected elements of the ECA approach: Emotion – Cognition – Action. Science and ecological topics are therefore explored not simply as knowledge to be learned. Learners connect them to their own experiences and feelings, ask questions, observe, compare, measure and think, and then apply or extend their learning through concrete actions.

The collection is not intended as a fixed teaching sequence. It is a flexible practical toolkit. Teachers can select and adapt activities according to the topic, age group, learners and educational context.

Garden Lesson Plans

8 lesson plans

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Bird Feeder

Cognition on feeding birds.
Making a bird feeder.

School: **Class:** **Subject:** Biology **Teacher:** **Deadline:**

Book, pages, websites:

Emotion	Cognition	Action
• What do birds need in the winter time? • What does it feel like to help them? • Have you ever been very - very hungry? • Who cares about you?	• Feeding strategies for birds • What to give and what not to give to birds • Energy and food functions • Seeds or insects, the role of fat and protein • Differences among species • Food chain • Survival strategies for the winter	• In groups of four make simple birdfeeders from reused wood materials • Drapa play about a bird mother being late with food. What do little birds do, feel... • Write a text for little birds waiting for the lunch. Use the rhythms of bird songs • How much bird food do you need in an average garden for the winter

Instructions:

Teachers' notes:

Co-funded by the
Erasmus+ Programme
of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Biodiversity

Discover the beauty of life and diversity on our planet.

School: Gedania **Class:** **Subject:** **Teacher:** **Deadline:**

Book, pages, websites:

https://view.genially.com/65482605f2a08d00120172b2/interactive-content-save-the-planet-game

Emotion	Cognition	Action
• How do you feel when you see nature around you? • Do you like animals and plants? Why?	• Students learn about biodiversity and Earth's ecosystems. • They explore how living beings depend on each other.	• Discussion: HOW TO TAKE CARE OF OUR PLANET? • Create a Prezi or Popplet presentation about Earth. • Make large-format artwork using natural materials. • Virtual trip around Earth – Google Earth. • Interactive mission game: Save the Planet! (see link)

Instructions:

Students rotate between activity stations. Teachers facilitate exploration and creativity.

Teachers' notes:

There are a number of Save the Planet games. Just write it in the Google.

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Rocks and Minerals

Learn about the Earth's layers and how rocks are formed

School: Gedania **Class:** **Subject:** **Teacher:** **Deadline:**

Book, pages, websites:

- Introduction to Rocks: https://www.youtube.com/watch?v=NOEXq_boHcU
- https://zasobyip2.ore.edu.pl/pl/publications/download/23635
- https://www.bbc.co.uk/bitesize/topics/z9bbkqt/articles/zgj9r2p

Emotion	Cognition	Action
• What does the inside of Earth look like? • How are people similar to rocks — all different, but all special? • Which "layer" of yourself do you show most often, and which one do you keep deep inside? • What do you need to stay strong and balanced, like the Earth holds	• Students watch a film about Earth's formation and structure. • They identify different rock types and minerals.	• Use online scenario: Layers of Earth (see link 2) • Play interactive BBC game: Rocks and Minerals. (see link 3) • Create Prezi/Popplet presentation: How was Earth formed?

Instructions:

Students rotate between activity stations. Teachers facilitate exploration and creativity.

Teachers' notes:

Encourage curiosity, teamwork, and environmental awareness.

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Lemon balm

- *Environmental: recognizing and using lemon balm.*
- *Cognitive: processing the steps and uses.*
- *Emotional: connecting with the plant and the shared tea experience.*
- *Action: harvesting, drying, labeling, and making tea.*

School: **Class:** **Subject:** **Teacher:** **Deadline:**

Book, pages, websites:

Emotion	Cognition	Action
• What scents can you recognize with your eyes closed? • What is your favorite scent? • Do you drink tea? What feelings are connected to tea time? • Which famous person would you invite for a cup of tea?	• What does lemon balm need? Where does it grow well? What insects do we see around it? • Why do we not put it straight into a bag? How should we dry it? What happens to the plant during drying? • What properties does it have?	• Design your own lemon balm labels. • Write a praising poem for lemon balm. • Go through the whole process (picking, drying, packing, labelling) and make gift packages. • Observe lemon balm and document it (smell, leaf shape, insects, growing place).

Instructions:

Teachers' notes:

Co-funded by the
Erasmus+ Programme
of the European Union

Cherry

Processing fruit: making jam, syrup, cake, and preserves.

School: **Class:** **Subject:** **Teacher:** **Deadline:**

Book, pages, websites:

Emotion	Cognition	Action
• What family traditions do you have about preserving food? • Do you have a pantry. What do you keep there? What does a full pantry mean to you? • Have you ever made jam? • Do you have a favorite jam?	• Where does the cherry we buy in the store come from? • What happens to the fruit that is not picked? • Why is heat treatment needed? • What preservation methods exist? What are their advantages and disadvantages?	• Find where the closest "pick-your-own" place is and go cherry picking. • In small groups, make jam, cake, syrup, and preserves. Which cherries are best for each? • Write a rap song encouraging jam making. • Draw a flowchart of the preserving process.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Trees

- *To understand the importance of trees in nature and in everyday life.*
- *To identify the main parts of a tree and their functions.*
- *To learn how trees help people, animals, and the environment.*
- *To encourage care for trees through hands-on, multiple-intelligence-based activities.*

School: **Class:** **Subject:** **Teacher:** **Deadline:**

Book, pages, websites:

- National Education Office: Environmental Studies Grade 3 textbook (OH-KOR03TA).
- Digital textbook: Environmental Studies, Grade 3.
- https://www.fenntarthatosagi.temahet.hu/letoltheto-oratervek/talpalatnyi-elet
- https://www.nkp.hu/tankonyv/kornyezetismeret_3_okosgyujtemeny_nat2020/lecke_02_006

Emotion	Cognition	Action
• Have you got a favorite tree? • Have you ever climbed?	• A tree has roots, a trunk, branches, leaves, and sometimes flowers, fruits, or seeds. • Trees need water, light, air, and soil to grow. • Trees give oxygen, shade, food, shelter, and raw material (wood). • Trees change through the seasons and can be identified by their leaves, bark, fruit, and shape. • Trees are important for clean air, biodiversity, and climate protection. • Trees must be protected and planted responsibly.	• Tree-senses walk: observe a tree with sight, touch, smell, and sound, then to describe it with words. • Create a labelled tree model or poster showing roots, trunk, branches, and crown. • Leaf rubbing and leaf shape sorting: compare leaves and group them by shape. • Draw or build a “my tree” collage using natural materials. • Make a short thank-you poem or song for trees.

Instructions:

Teachers’ notes:

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Bushes and Shrubs

- *To understand the role of shrubs in nature and in gardens.*
- *To identify the main features of shrubs.*
- *To learn how shrubs help people, animals, and ecosystems.*
- *To explore shrubs through varied, multiple-intelligence-based activities.*

School: **Class:** **Subject:** **Teacher:** **Deadline:**

Book, pages, websites:

- https://kids.britannica.com/students/article/shrub/277050
- National Education Office: Environmental Studies Grade 3 textbook (OH-KOR03TA).
- Digital textbook: Environmental Studies, Grade 3.

Emotion	Cognition	Action
• What can you use a bush for? • Have you ever picked berries or flowers from a shrub? • Which shrub reminds you of your home or neighborhood?	• Shrubs are woody plants with many stems that branch near the ground. • Shrubs can have leaves, flowers, fruits, and seeds, and they change through the seasons. • Shrubs provide food and shelter for birds and other animals. • Shrubs help protect soil, support biodiversity, and make gardens beautiful. • Common shrubs include lilac, rose, elder, hawthorn, and currant. • Shrubs need sunlight, water, soil, and care to grow well.	• Create a labeled shrub model or poster showing stems, leaves, flowers, fruits, and roots. • Leaf and berry sorting: compare different shrub leaves fruits and other aspects, then group them by shape or colour. • Make scratch book out of natural materials especially bush parts. • Find put different rhythms for different bushes. Make short concert.

Instructions:

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Bee hotels

- *To understand why insect hotels are important in a garden.*
- *To learn how helpful insects support plants and biodiversity.*
- *To explore the topic through sensory, creative, logical, and cooperative tasks.*
- *To encourage care for nature through hands-on building and observation.*

School: **Class:** **Subject:** **Teacher:** **Deadline:**

Book, pages, websites:

- https://utakerthez.hu/blog/rovarhotel/
- https://www.fenntarthatosagi.temahet.hu/letoltheto-oratervek/talpalatnyi-elet
- https://gyerekszoba.hu/csalad/rovarhotel-keszitese-gyerekekkel-hasznos-otletek/

Emotion	Cognition	Action
• Are you afraid of insects? • How do you feel when you see tiny insects in the garden? • Have you ever watched bees, ladybirds, or butterflies closely?	• An insect hotel is a shelter for helpful insects in the garden. • Insects help with pollination, pest control, and supporting biodiversity. • Bug hotels can be made from natural materials such as wood, reeds, pine cones, straw, bark, and leaves. • A good bug hotel is dry, stable, protected from rain, and placed in a warm, safe spot. • Different insects need different spaces and materials.	• Build a small insect hotel from recycled and natural materials. • Sort materials by type and decide which insects would use them. • Create a poster or label set for the bug hotel showing the guests and their rooms. • Do an observation walk in the garden and record where insects might find shelter. • Make a short “welcome poem” or song for the insects.

of the European Union

Skill-Building Lesson Plans

9 lesson plans

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Observation

Students consciously observe the natural elements of their immediate environment. Using their senses, they explore the diversity of nature, recognise the basic characteristics of living and non-living things, and develop curiosity, a sense of wonder, and an appreciation of the beauty of the natural world.

School: **Class:** **Subject:** Environmental studies **Teacher:** **Deadline:**

Book, pages, websites:

Environmental Studies Grades 1–2

Emotion	Cognition	Action
• Which bird do you see most often in winter? • What is the most interesting thing you have ever noticed in nature? • Have you ever discovered something small in nature that other people didn't notice? Tell us about it. • Do you like observing nature quietly?	• Using the senses for observation. • Living and non-living things. • Natural and human-made materials. • Colours, shapes and patterns in nature. • Recognising similarities and differences. • Simple classification based on observed characteristics.	• Collect five different natural objects and discuss how they are similar and how they are different. • Move quietly for one minute, then stop, close your eyes and count how many different sounds you can hear. • Use natural materials or your body to imitate the sounds of rain, wind or the forest. Perform a short „nature concert" together. • Choose three natural objects and give each of them a new imaginary name. Explain why you chose those names. • Work in pairs. Find one natural object that especially attracts you. Observe it quietly for one minute, then explain how it looks like. Do not say what it is. Your pair should find it.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Observation as an Attitude

Students experience that observation is not only a way of gathering information but also an attitude of attention and curiosity. They learn to slow down, be fully present, observe with an open mind, and notice details they may previously have overlooked.
NOw, we turn towarsd Nature with the same attention as we turn towards our companions.

School: **Class:** **Subject:** Environmental studies **Teacher:** **Deadline:**

Book, pages, websites:

Oxford International Primary Science 1

Emotion	Cognition	Action
• When do you feel that you are truly present in a moment? • Is it difficult for you to stay in silence? • Do you prefer taking a quick look or observing things carefully? Why?	• The difference between observation and interpretation. • The role of focused attention. • Using the senses for observation. • Details and the whole picture. • Recognising similarities and differences. • Identifying patterns in nature. • Asking questions based on observations.	• Next week, notice something new on a way you walk on many times. • Pairwork. One partner silently points out three interesting details in the surroundings while the other simply observes. Then switch roles. • Stand facing your partner. Observe each other carefully. At a clap, turn around and make one small change to your appearance, e.g. adjusting your hair Turn back to face each other and try to spot what has changed.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Describing things

Students use precise vocabulary to describe natural objects, living organisms, and natural phenomena.

School:		Class:		Subject:	Environmental studies	Teacher:		Deadline:	

Book, pages, websites:

Oxford International Primary English 2–3

Emotion	Cognition	Action
• Have you ever tried to describe something to someone who couldn't see it? What was it? • Which is easier: showing something or describing it? Why? • Have you ever struggled to find the right words to describe something? What can you do in that situation? • Which of your senses helps you the most when you want to describe something?	• Facts and opinions • Observation and description • Characteristics • Precision • Objectivity • Interpretation	• Draw the same leaf or stone, observing as many details as possible. Then compare your drawings. • Choose a natural object that you particularly like. Describe it using five words without naming it. • Listen to a short nature sound (e.g. rain, wind, or birdsong). Collect words that describe the sound.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

Describing without judging

Students experience that accurate description comes before interpretation and evaluation. They practise distinguishing facts from opinions and develop the foundations of non-judgemental communication.

School: **Class:** **Subject:** Environmental studies **Teacher:** **Deadline:**

Book, pages, websites:

Oxford International Primary English 2–3

Emotion	Cognition	Action
• Have you ever been misunderstood? What happened? • Has someone ever seen the same situation differently from you? • Which is easier for you: saying what you see or saying what you think about it? • When might it be crucial to describe something before judging it?	• Perspective • Fact and Opinion • Objectivity • Assumption • Bias • Evidence • Multiple Interpretations	• Observe a plant or a stone. First describe its observable features, then separately list the thoughts or feelings it brings to mind. • Work in pairs. One partner takes different body positions. The other may describe only what is visible (e.g. "Their arms are crossed.") without guessing how the person feels or what they are thinking. • Work in pairs. One of you describes an object while the other listens carefully and identifies which statements are facts and which are opinions. • You will receive a short text. Rewrite the judgemental sentences as descriptive sentences. (e.g. "This is an ugly leaf." → "The leaf is brown and has jagged edges.") Create two columns: What do I see? and What do I think about it?, then sort the sentences into the appropriate column. • Listen to a short piece of music. First describe only what you hear (e.g. instruments, volume, tempo), then discuss separately what feelings the music evoked in you.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Comparing

Students identify similarities and differences between natural objects, living organisms, and natural phenomena. They develop observation skills, classification skills, and comparative vocabulary.

School: **Class:** **Subject:** Environmental studies **Teacher:** **Deadline:**

Book, pages, websites:

Cambridge Primary Science Learner's Book 2–3

Emotion	Cognition	Action
• Can you think of two things in nature that are similar? • Have you ever thought two things were the same, but later discovered they were different? • What do you find more interesting: looking for similarities or differences?	• Similarities and differences • Perspectives • Criteria • Diversity and uniqueness • Shared characteristics • Acceptance	• Group different natural objects according to your own criteria. Explain the rule you used.. • Collect different natural objects. Arrange them along an imaginary line (for example, from the smallest to the largest or from the smoothest to the roughest), then explain your reasoning. • Listen to two different nature sounds. Compare them in terms of volume, rhythm, tempo, and mood. • Compare two leaves. Your goal is not to find as many differences as possible, but to identify as many comparison criteria as you can (e.g. colour, shape, veins, edge, texture, thickness, flexibility). • Each group receives an unknown natural object. You have two minutes to find a "relative" = another natural object that is most similar to it. Then present your choice and explain your reasoning. • Write a short self-introduction from the perspective of a natural object (e.g. "I am rough, and I like damp places..."). The others must find the object that best matches the description and explain why they chose it. • There are four natural objects on the table. Decide which one is the odd one out and explain your reasoning. • Choose two completely different natural objects. Act out a gradual transformation in which one slowly changes into the other.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

Measuring

Students experience how measurement helps us understand the natural world more accurately. They measure the length, weight, or volume of natural objects and compare their findings.

School: **Class:** 1-3 **Subject:** **Teacher:** **Deadline:**

Book, pages, websites:

Publishing – Environmental Studies 2-3

Emotion	Cognition	Action
• Which bird do you see most often in winter? • How can we know whether two things are really the same length or weight? • Have you ever guessed the size or weight of something incorrectly? • Do you enjoy measuring things? What did measure recently?	• Measuring quantities • Units of measurement • Appropriate measuring tools • Comparing estimation and measurement • Measurement accuracy • Recording measurement results • Comparing data	• Measure the weight of different stones, the length of different sticks and rank them from the lightest to the heaviest. • Estimate the circumference of a tree trunk, then check your estimate using a measuring tape. • Compare the volume of different natural objects (e.g. acorns, chestnuts, pine cones) using water displacement. Create a shared table of your measurements. • Find a natural object in the garden or schoolyard that is approximately 20 cm long.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Measuring 2

Students experience how measurement helps us understand the natural world more accurately. They measure the length, weight, or volume of natural objects and compare their findings.

School: **Class:** 1-3 **Subject:** **Teacher:** **Deadline:**

Book, pages, websites:

Mozaik Publishing – Environmental Studies 2-3

Emotion	Cognition	Action
• How do you feel when you find out that you were wrong? • Why is it sometimes better to check or measure something instead of just guessing? • Have you ever had a different opinion about a situation than someone else? • How did you find out what had really happened? • What does it mean to you when something is accurate?	• Striving for accuracy • Estimating and verifying • Facts and opinions • Objective observation • Evidence-based thinking • Seeking reliable information • Verifying one's own claims • Drawing well-founded conclusions	• Observe a short scene and describe exactly what you saw without adding explanations or judgments. • Find statements from everyday life or the internet that can be verified through measurement or evidence. • Create a simple checklist for verifying the accuracy of information. • Choose one of your own assumptions and plan how you could test whether it is true.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

Classification

Students classify natural objects using different criteria, recognise similarities and differences, and understand that there are multiple valid ways to organise observations in scientific inquiry.

School: **Class:** **Subject:** **Teacher:** **Deadline:**

Book, pages, websites:

Mozaik Publishing: Environmental Studies 2–3.

Emotion	Cognition	Action
• Do you enjoy organising things, or do you prefer a more untidy environment? • Have you ever seen someone organise the same objects differently from you? • How do you feel when you discover a new pattern or connection?	• Criteria • Similarities and differences • Shared characteristics • Recognising relationships • Identifying patterns • Creating simple categories	• Create a poster showing at least three different ways to classify the same collection. • Find natural objects that could belong to more than one group and discuss why. How can you make a decision? • Examine different rocks and create your own categories based on observable characteristics.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Classification 2

Students recognise that classification is useful not only in science but also in everyday thinking, problem-solving, and understanding relationships. They learn that the same situation can be organised and interpreted from different perspectives.

School:		Class:	1-3	Subject:	Life skills	Teacher:		Deadline:	

Book, pages, websites:

Mozaik Publishing: Environmental Studies 2–3.

Emotion	Cognition	Action
• Have you ever formed a wrong first impression of someone? • What helps you organise your thoughts? • Have you ever discovered something in common with someone you thought was completely different from you? • What happens when we look at a situation from only one perspective? • Have you ever solved a problem by looking at it differently?	• Recognising patterns • Identifying common ground between people • Applying multiple perspectives • Organising problems • Distinguishing essential from irrelevant information • Recognising relationships • Identifying shared goals • Flexible thinking	• Collect statements from a conflict and classify them into feelings, needs, and possible solutions. • Read three short stories and identify the common pattern they share. • Examine a conflict from the perspectives of at least three participants • Identify characteristics that connect the members of your group, then identify characteristics that make them different.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

ECO Days Lesson Plans

6 lesson plans

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

No Car Use

• Students recognise that everyday transport choices influence their own health, air quality and the quality of life in their community.
• Through experience they discover the value of walking and cycling.

School: **Class:** 3-4 **Subject:** Science **Teacher:** **Deadline:**

Book, pages, websites:

Emotion	Cognition	Action
• How do you like your stree? • Do you regularly go to forests, outings , natural places? • Do you like living in a city or would you like to live in a farm?	• Main reasons of air pollution • Ways of transport • Sustainable transporting solutions	• That would be our street without cars – Draw a poster or make a mockup • While walking, kids make notes about different natural and man-made sounds (birds, wind, leaves and car, bus, horn, sirene). They make a sound-map or simple rythmgame. • Students get roles: tree, car, small kid, bird, old man, bus, dog, pavement. A child start telling a tale: it is 8 o'clock in the morning. The first cars arrive here. When the tale ends, everybody shares tehir feelings.

Instructions:

Teachers' notes:

Show the ways, families may make a conscious choice to have or use the car.

Co-funded by the Erasmus+ Programme of the European Union

Animals

• Students observe the animals living around the school, with a special focus on birds.
• They recognise that a garden is a shared habitat for humans and wildlife, and understand how their own actions can support local biodiversity.

School: **Class:** **Subject:** Science **Teacher:** **Deadline:**

Book, pages, websites:

Emotion	Cognition	Action
• Which animal do you like the most? Why? • Have you ever had a close encounter with a wild animal? How did you feel? • Which bird do you see or hear most often? What do you like about it? • Which animal do you think feels happiest in our school garden? Why?	• Animal adaption to habitats; • What makes a garden bird-friendly (food, water, shelter and nesting places); • Relationships between plants and animals; • Identifying several common local garden birds.	• Choose and animal and show it without words. Others guess the species. • Role-play a bird living in the school garden. Teacher asks max. 15 question to find out the animal. • Have a look around the garden. What animals live here? Make a map about the garden and its inhabitants.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

The Soil

- *Students explore soil as a living habitat.*
- *They recognise the role of soil organisms.*
- *They understand that healthy soil is essential for life.*

School: **Class:** **Subject:** Science **Teacher:** **Deadline:**

Book, pages, websites:

Mozaik (English edition): Soil, Soil Protection

Emotion	Cognition	Action
• Do you like walking barefoot on grass or soil? Why? • What do you think is happening in the ground whatwe cannot see it? • Have you ever observed an earthworm or another soil animal? How did you feel?	• Soil formation. • Soil layers. • Soil organisms. • The role of decomposers. • Humus formation. • Soil conservation.	• Soil Detectives: Compare soil samples collected from different places. Observe colour, texture, smell, moisture and living organisms. • Create a movement sequence showing how rocks break down, organic matter decomposes and fertile soil is formed. • Write a short letter from the perspective of an earthworm explaining why healthy soil is important.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Wetlands

- *Students explore the importance of wetlands.*
- *They discover their rich biodiversity.*
- *They understand their role in maintaining healthy ecosystems.*

School: **Class:** **Subject:** **Teacher:** **Deadline:**

Book, pages, websites:

Emotion	Cognition	Action
• Which bird do you see most often in winter? • Do you have a favourite lake, stream or wetland? Why? • How do you feel when you are near water? • What would you miss most if lakes and wetlands disappeared?	• Characteristics of wetlands. • Wetland plants and animals. • Food chains. • Importance of biodiversity. • Ecological functions of wetlands. • Wetland conservation.	• Create a visual food web showing relationships between wetland organisms. • Create a soundscape using natural sounds inspired by wetlands. • The Wetland Council: Role-play different wetland species and discuss together what is needed to keep the wetland healthy.

Instructions:

Teachers' notes:

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

The Forest

- *Students explore the forest as a complex ecosystem.*
- *They recognise the interdependence of living organisms*
- *They understand the importance of forests for people and nature.*

School:		Class:		Subject:	Environmental Studies	Teacher:		Deadline:	

Book, pages, websites:

Mozaik Environmental Studies 4

Emotion	Cognition	Action
• What is your favourite memory from a forest? • How do you feel when you enter a forest? • Have you ever had a favourite tree? Why? • What would you miss most if forests disappeared?	• Bird adaptations to winter. • The forest as an ecosystem. • Food webs. • Interdependence of living organisms. • Ecological functions of forests.	• Search for signs of wildlife such as leaves, cones, feathers, nests, footprints and feeding marks. Who did they belong to? • Represent forest organisms and connect them with strings to build a living food web. Observe what happens when one species disappears. • In small groups create a one-page newspaper. Include a news article, an interview, weather forecast and a short conservation message encouraging people to protect the forest.

The Earth

Students recognise that their everyday choices affect the Earth's ecosystems and discover how they can contribute to protecting the environment.

School: | **Class:** | **Subject:** Environmental Studies | **Teacher:** | **Deadline:**

Book, pages, websites:

Mozaik Environmental Studies 4

Emotion	Cognition	Action
• Which bird do you see most often in winter? • What do you love most about our planet? • Where in nature do you feel happiest? Why? • What would you like future generations to experience just as you do today?	• Earth as a living system. • Natural resources. • Sustainability. • Ecological footprint. • Human–environment interactions. • Environmentally responsible lifestyles.	• Collect natural objects and classify them according to their origin and characteristics. • Estimate your ecological footprint using a simple questionnaire and compare the class results. • Create a class list of ten simple environmental actions and try to follow them for one week.

Nature in the Classroom Lesson Plans

3 lesson plans

ECA - Developing a Skill Building Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Building a florarium

Students discover that nature can thrive even in a small space, explore how a closed ecosystem functions, and take responsibility for caring for a living system by creating their own terrarium.

School:		**Class:**		**Subject:**	Environmental Studies	**Teacher:**		**Deadline:**	

Book, pages, websites:

Mozaik Environmental Studies 4

Emotion	Cognition	Action
• Do you have a plant at home or in your room? • Have you ever taken care of a plant? • How does it feel to be responsible for a living thing?	• Florarium • Closed ecosystem. • Water cycle. • Transpiration. • Photosynthesis. • Plant needs.	• Layer gravel, activated charcoal, soil and moss in a glass container, then plant small plants. • Keep an observation journal and record condensation, plant growth and other changes each week • Design how many of these florariums may be placed in your classroom. • Share responsibilities within the group, such as observation, maintenance and record keeping, and care for your classroom terrarium together.

The Web of Life

Students understand that all living organisms are interconnected. They explore the roles of producers, consumers and decomposers, and collaboratively create a growing classroom installation that represents the Web of Life.

School:		Class:		Subject:	Environmental Studies	Teacher:		Deadline:	

Book, pages, websites:

Mozaik Environmental Studies 3–4

Emotion	Cognition	Action
• Which bird do you see most often in winter? • Which living organism do you feel closest to? Why? • Why might even an animal or organism that we dislike be important? • Do you think that the anilmal or plant you don't like feel that it is not liked?	• The Sun as an energy source. • Photosynthesis. • Producers. • Consumers. • Decomposers. • Feeding relationships. • Nutrient cycle. • Ecosystem.	• You are standing in a big circle. Secretly find two other people. You must make a triangle with them. When they move, you move, too. • Each student represents a different living organism. Using a ball of string, pass the string only to an organism that is directly connected to yours in nature. Gradually create a large web. Then remove one organism from the web and observe how the connections change. Discuss how the loss of one species affects the whole ecosystem. • Work in small groups to solve ecosystem challenge cards, such as: The bees disappear. The pond dries up. The mice population grows rapidly. A forest is cut down. Predict how these changes affect the other living organisms in the ecosystem. • Write a Love Letter: Choose a living organism and write a letter to another organism in the ecosystem (for example, an oak tree writing to an earthworm, or a rabbit writing to the grass). Explain why the other organism is important for your survival. • Design a large poster showing the many connections between living organisms. Use different coloured strings or arrows to represent different types of relationships, such as feeding, shelter, pollination, decomposition, or seed dispersal. Show that nature is a web of interconnected relationships rather than a simple food chain.

Food Web

Students understand the relationships between plants, animals and decomposers, and collaboratively create a classroom installation illustrating the cycle of life.

School:		**Class:**		**Subject:**	Environmental Studies	**Teacher:**		**Deadline:**	

Book, pages, websites:

Mozaik Environmental Studies 4

Emotion	Cognition	Action
• Which living organism in the food chain would you like to be? Why? • Do you think every living thing has a role in nature?	• Photosynthesis. • Producers. • Consumers. • Decomposers. • Food chain. • Nutrient cycle.	• Use living plants, pictures of animals, decomposers, and real compost or soil to create a classroom ecosystem together. Use string or arrows to connect producers, consumers and decomposers, then discuss what happens if one part of the system disappears. • Compose music for the instal-laton. Take out one piece and compose an other piece of music that shows what happens int he new situation.

Comets

Get info about comets

School: **Class:** **Subject:** Geography **Teacher:** **Deadline:**

Book, pages, websites:

https://www.youtube.com/watch?v=D1o91Wf75pM&utm_source=chatgpt.com
https://www.youtube.com/watch?v=_f3xzT-JPaY
https://www.youtube.com/watch?v=8wFRZV4WiGE
https://study.com/academy/lesson/video/comet-lesson-for-kids-definition-facts.html?utm_source=chatgpt.com

Emotion	Cognition	Action
• When have you felt like a comet — distant and cold, then coming closer and shining? • What "tail" (past actions, mistakes, memories) do you carry that influences how people see you now? • How do you change or reveal more of yourself when you're under pressure or heat (stress)?	• Comets are made of ice, dust, and rocky particles — sometimes called "dirty snowballs • They travel in elliptical orbits around the Sun, coming in from far away. • As they approach the Sun, heat causes their ice to vaporize, creating a glowing coma and tail. • Comets deliver materials (ices, organic molecules) that may have contributed to planetary formation.	• Use glitter, tissue paper, watercolors and spray mist to create your own comet with tail and coma effect. • Construct a hanging mobile: small balls as comets, threads showing their elliptical paths, Sun in center — show how some approach and recede. • Using dry ice or frozen water with embedded colored dust or tiny particles, observe sublimation (ice → gas) in a dark room or outside, to simulate how comets develop tails.

Galaxy

Get info about galaxies

School: **Class:** **Subject:** Geography **Teacher:** **Deadline:**

Book, pages, websites:

https://www.youtube.com/watch?v=TAK0JkOArS4&utm_source=chatgpt.com
https://spaceplace.nasa.gov/galaxy/en/
https://spaceplace.nasa.gov/galactic-explorer/en/
https://kids.britannica.com/kids/article/Milky-Way/353466?utm_source=chatgpt.com
https://www.planetsforkids.org/galaxies.html?utm_source=chatgpt.com

Emotion	Cognition	Action
• When do you feel like part of a "galaxy" — connected to many people or ideas? • How do you respond when two parts of your life "collide" (conflict, change)? • What helps you grow (form new "stars") when circumstances shift?	• A galaxy is a huge collection of stars, gas, dust, and dark matter, all bound by gravity. • Galaxies come in different shapes (spiral, elliptical, irregular) and sizes. • Our solar system is part of the Milky Way galaxy, one of billions in the universe. • Galaxies evolve, can collide, merge, and trigger new star formation.	• Galaxy collage: create yourr own galaxy using paint, glitter, torn paper, and radial patterns (spirals). Emphasize structure (center, arms, dust clouds). • Galaxy model mobile: Build hanging models of different types of galaxies (spiral, elliptical, irregular) with wire, paper, and string, showing shapes and parts. • Galaxy collision simulation: Using two containers of glitter, sand, and colored water, gently push them together to shhow how galaxies merge.

Stars

Get info about stars

School: **Class:** **Subject:** Geography **Teacher:** **Deadline:**

Book, pages, websites:

https://www.youtube.com/watch?v=2FbDByz5f5M&utm_source=chatgpt.com

Emotion	Cognition	Action
• What makes you feel proud of yourself? • Who inspires you to be your best? • How do you help others shine too? • Where do you have your energy from? Who do you give energy to?	• Stars are giant balls of hot gas (mainly hydrogen and helium) that produce light and heat through nuclear fusion. • They are born in nebulae — clouds of gas and dust that collapse under gravity. • Stars vary in size, color, and temperature (blue = hottest, red = coolest). • A star's life cycle includes formation, main sequence, and eventual death (white dwarf, neutron star, or supernova). • Our Sun is a medium-sized star, providing energy for all life on Earth.	• Star life cycle timeline: illustrate or build a fold-out timeline showing the stages of a star's life, labeling each step with color and texture. • Constellation lanterns: Use paper cups or jars; punch small holes forming star patterns. Place a small LED inside to show constellations glowing in the dark. • Star spectrum art: Using colored chalk or watercolor, create a gradient of star colors from blue to red and label each with its temperature and size — a "stellar rainbow."

Constellation

Get info about constellations

School: **Class:** **Subject:** Geography **Teacher:** **Deadline:**

Book, pages, websites:

https://activity-mom.com/2022/04/marshmallow-constellations-craft-for-kids-free-printable/
Cards: https://printable.rjuuc.edu.np/en/printable-constellation-cards.html
https://www.etsy.com/listing/1386669548/constellation-poster-star-map-print-kids

Emotion	Cognition	Action
• How do your friendships or family connections fit together? • Who helps you find direction when you feel lost? • What story do you think your own constellation would tell?	• Constellations are patterns of stars in the night sky, often named after mythological figures, animals, or objects. • They help humans navigate and mark seasons. • The stars in a constellation are usually far apart in space, not physically connected. • Different cultures have different constellations and stories about them. • Learning constellations can help understand star positions, galaxy locations, and the broader structure of the sky.	• Marshmallow Constellations: Use mini marshmallows and toothpicks to create models of different constellations. • Constellation Cards: Create flashcards featuring different constellations. On one side, draw the star pattern; on the other, include the name and a brief myth or fact about it. • Glow-in-the-Dark Star Map: Design a star map on black paper using glow-in-the-dark paint or stickers to represent stars.

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Seed Germination Laboratory

Task: Germinate beans, peas or wheat. Observe their development and compare two different conditions (for example, light-darkness or more-less water). What do you predict: which plant will grow faster? Why?

Name: **Date:** **Class:**

Day / step	Measurement / data	Notes

What did you notice and observe?

What conclusion did you reach?

How did you feel while caring for the plant?

What did you learn about germination and plant development?

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Classroom Composting – Vermicomposting

Task: Observe how different materials change in compost.
Compare, for example, apple peel, paper and plastic.
What do you predict: which material will decompose fastest? Why?

Name: **Date:** **Class:**

Day / step	Measurement / data	Notes

What did you notice about the changes in the different materials?

What did you conclude: what decomposes and what does not?

How do you feel when you see an earthworm or decomposing plant material?

What did you learn about decomposers, composting and soil formation?

Co-funded by the

ID: A210-SCH-68712CF5

Describing without judging

Task: Observe a plant, stone or another natural object. First write only what you can actually see. Then write separately what you think or feel about it.

Name: **Date:** **Class:**

What do I see? - fact, observation	What do I think about it? - opinion, interpretation

Rewrite one judgemental sentence as a descriptive sentence!

Judgemental sentence: _____

Descriptive sentence: _____

Which was easier: describing what you see or saying what you think about it?

_____

How did you feel when you had to separate fact from opinion?

_____

What did you learn about non-judgemental description?

_____

Water Rescue Mission

Observe how you use water during an ordinary day.
Choose one habit that can save water and
practise it for a week.

Name: **Date:** **Class:**

1. Observe / find / try it out, etc.!

Write down what you used water for during the day. Find at least three examples.

2. Write it down!

Write down where you could use less water.

3. Think about it!

Which water-saving habit will you choose for one week? Why this one?

4. What will I bring back to class?

Write down whether you managed to practise it for a week and what you experienced.

What did I learn?

How did I feel?

I enjoyed it · I was curious · I was surprised · I was proud · it was difficult · I was bored · it annoyed me · I was unsure · other: _____

ID: A210-SCH-68712CF5

International Day for Biological Diversity

Look for as many different plants, insects, birds or other living things as you can around your home, in a garden or in a nearby park.

Name: **Date:** **Class:**

1. Observe / find / try it out, etc.!

Write down at least five different living things that you found.

2. Write it down!

Write down where you found them. Which one surprised you or did you especially like?

3. Think about it!

Why is it good that living things are not all the same? How might they be connected to one another?

4. What will I bring back to class?

Bring one idea for how your family or school can help preserve biodiversity.

What did I learn?

How did I feel?

I enjoyed it · I was curious · I was surprised · I was proud · it was difficult · I was bored · it annoyed me · I was unsure · other: _____

Supernovae

A supernova is the explosive death of a star. During the explosion, elements are released into space and may later become part of new stars, planets and living things. Think about the connection between change and new beginnings.

Name: **Date:** **Class:**

1. Observe / find / try it out, etc.!

Find one interesting fact about supernovae.

2. Write it down!

Draw a short personal "supernova timeline": mark one major change or ending, then show what came out of it.

3. Think about it!

What "element" - a lesson, strength or new goal - stayed with you from this change?

4. What will I bring back to class?

Complete the sentence: "If my life had a supernova moment, it would be like..."

What did I learn?

How did I feel?

I enjoyed it · I was curious · I was surprised · I was proud · it was difficult · I was bored · it annoyed me · I was unsure · other: _____

ECA Project Plans

3 project plans

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Recycling

Students recognise that waste can be a valuable resource, understand the difference between reuse and recycling, and look for creative ways to reduce waste.

Duration: 2–3 lessons **Grade/class:** Grades 3–4 **Location:** classroom / school

Emotions	Cognitions	Actions
• It connects to personal objects and consumption habits: what do we feel sorry to throw away, and what could we continue to use or repair? • What feelings, personal experiences or relationships does the project connect to?	• Waste and raw materials; the 5R/6R approach (refuse, reduce, reuse, repair, recycle, rot); selective waste collection; circular economy; data collection and simple chart making. • What knowledge, questions or thinking skills does it develop?	• Students carry out a waste audit, sort and count materials, then create a poster promoting repair or reuse. • What do the students do, create or change?

The stages of the project:

1. Observation / initial question

Examine what waste is produced in the classroom and what could actually still be used.

2. Information gathering

Gather information about material types, selective collection, and the meaning of refuse, reduce, reuse, repair, recycle and rot.

3. Plannig

Plan the waste audit: what you will collect, how you will sort it, what you will count, and how you will record the data.

4. Implementation

Carry out the waste audit; sort and count the material types, then create a simple bar chart.

5. Presentation, product

Create a poster or short advertisement encouraging people to repair or reuse objects.

6. Reflection

Discuss what surprised you during the audit and what the class or you yourselves could change.

Co-funded by the Erasmus+ Programme of the European Union

ECA - Developing a Skill Building
Balanced Emotion, Cognition and Action
ID: A210-SCH-68712CF5

Pollinator Week

Students learn about the role of pollinators in nature and food production, recognise the interdependence of plants and animals, and explore their own possibilities for protecting pollinators.

Duration: 2–3 lessons **Grade/class:** Grades 3–4 **Location:** schoolyard / garden / classroom

Emotions	Cognitions	Actions
• It connects to personal experiences and feelings about pollinators: curiosity, joy or fear, as well as the possibility of caring for them. • What feelings, personal experiences or relationships does the project connect to?	• The process of pollination; pollinators; flower structure; plant reproduction; food chains; observation and information gathering. • What knowledge, questions or thinking skills does it develop?	• Students observe pollinators, present a chosen pollinator, then design a pollinator-friendly schoolyard or garden. • What do the students do, create or change?

The stages of the project:

1. Observation / initial question

Observe a meadow, garden or schoolyard: what pollinators can you see, and which plants do they visit?

2. Information gathering

Gather information about a chosen pollinator: where does it live, which plants does it visit, what does it look like, and what is its role in pollination?

3. Plannig

In small groups, design a schoolyard or garden that provides habitat for as many pollinators as possible.

4. Implementation

Create the plan as a drawing, map or model; mark the elements that help pollinators.

5. Presentation, product

Present the plan and create a short description or infographic about pollination.

6. Reflection

Discuss whether your feelings about pollinators have changed and what you could really implement in your surroundings.

Nature Table

Students discover seasonal changes, observe the diversity of natural materials, and jointly create a continuously changing nature table in the classroom.

Duration:	over several weeks, regularly	**Grade/class:**	Grades 1–4	**Location:**	classroom and surroundings

Emotions	Cognitions	Actions
• It connects to nature, the seasons and personally meaningful natural objects: what do we keep from an excursion, and why is it important to us? • What feelings, personal experiences or relationships does the project connect to?	• Seasons; natural materials; fruits and seeds; biodiversity; observation, classification and simple data recording. • What knowledge, questions or thinking skills does it develop?	• Students collect and classify natural materials, jointly arrange and regularly update the nature table, then present new objects. • What do the students do, create or change?

The stages of the project:

1. Observation / initial question

Observe your surroundings: which natural objects show the current season, and which objects are interesting to you?

2. Information gathering

Collect natural materials and find out where they come from and what properties they have.

3. Plannig

Discuss how you will classify the objects (colour, shape, size, origin) and divide the tasks among yourselves.

4. Implementation

Set up the nature table, make a simple table of the collection, and update it regularly.

5. Presentation, product

Present the new objects to the class and explain what you observed about them or about changes in the environment.

6. Reflection

Discuss which object or change was most interesting and what you learned about the season and the diversity of nature.
